

TrueAllele® Computing: All the DNA, all the time

Continuing Professional Development
Sydney, Australia
March, 2014

Mark W Perlin, PhD, MD, PhD
Cybergenetics, Pittsburgh, PA

Cybergenetics

Cybergenetics © 2003-2014

DNA genotype

mother allele

father allele

A genetic locus has two DNA sentences, one from each parent.

An **allele** is the number of repeated words.

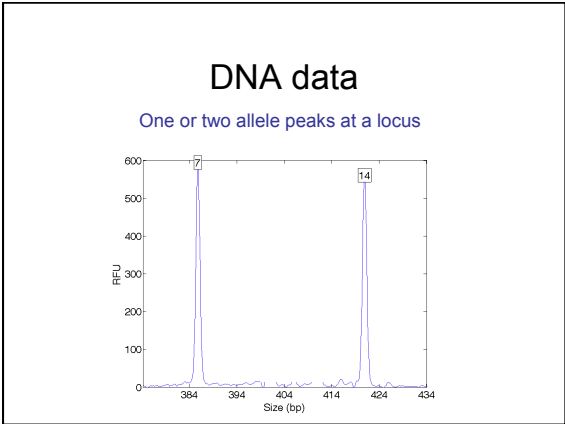

A **genotype** at a locus is a pair of alleles.

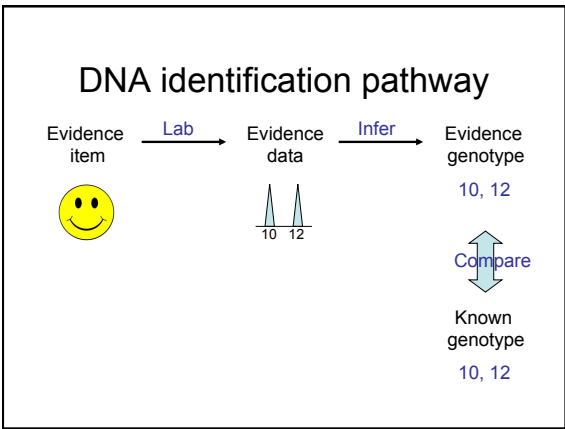

10, 12

Many alleles allow for many many allele pairs. A person's genotype is relatively unique.

One person, one genotype

Match information

At the suspect's genotype,
identification vs. coincidence?

after
(evidence)

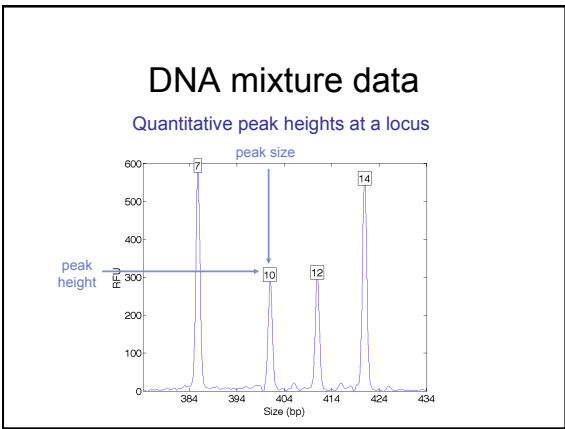

↑ data

before
(population)

$$\frac{\text{Prob}(\text{evidence matches suspect})}{\text{Prob}(\text{coincidental match})} = \frac{100\%}{5\%}$$

$$= 20$$

Human interpretation issues

Evidence

- call good data inconclusive
- peaks are too low for them
- too many contributors to handle
- potential examination bias

Database

- hit by association, not by match
- comparison: make false hits
- restrict upload: lose true hits

TrueAllele® Casework

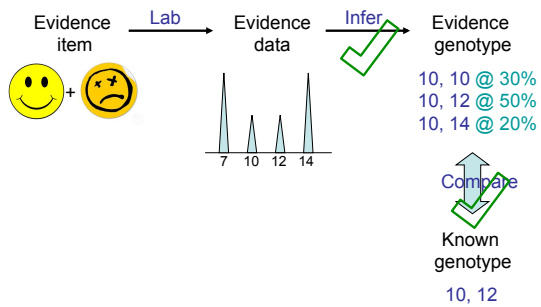

Evidence

- preserve data information
- use all peaks, high or low
- any number of contributors
- entirely objective, no bias

Database

- hit based on LR match statistic
- sensitive: find true hits
- specific: only true hits

DNA pathway restored

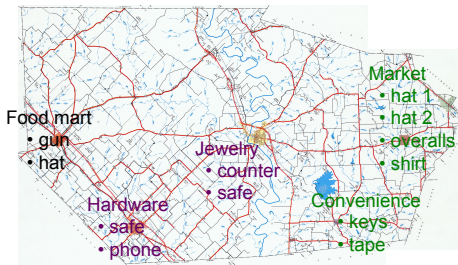

Match information preserved

At the suspect's genotype,
identification vs. coincidence?

$$\begin{array}{l}
 \text{after} \\
 \text{(evidence)} \\
 \uparrow \text{data} \\
 \text{before} \\
 \text{(population)}
 \end{array}
 \frac{\text{Prob}(\text{evidence matches suspect})}{\text{Prob}(\text{coincidental match})} = \frac{50\%}{5\%} = 10$$

Gang DNA from 5 crime scenes

Laboratory DNA processing

- | | |
|-------------------|--------------------|
| 12 evidence items | 10 reference items |
| Scene 1 • gun | 5 victims |
| • hat | • V1 |
| Scene 2 • safe | • V2 |
| • phone | • V3 |
| Scene 3 • counter | • V4 |
| • safe | • V5 |
| Scene 4 • keys | 5 suspects |
| • tape | • S1 |
| Scene 5 • hat 1 | • S2 |
| • hat 2 | • S3 |
| • overalls | • S4 |
| • shirt | • S5 |

Cybergentics TrueAllele® timeline

Day	Activity
1	Received evidence data from lab
2	Started computer processing
4	Replicated evidence results
9	Received known references
10	Calculated DNA match statistics
12	Reported match results to lab

TrueAllele computer matches

DNA match statistic:
553 million

People of California v. Charles Lewis Lawton
and Dupree Donyell Langston
November, 2012
Bakersfield, CA

Admissibility hearing
and trial testimony

Expected match statistic

Specific match statistic

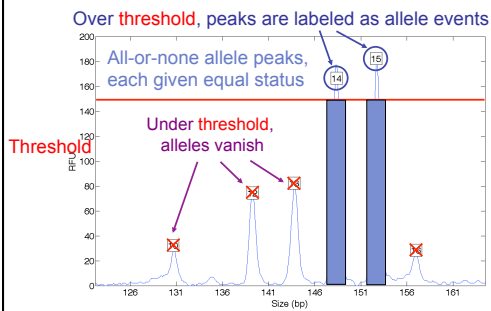

Computers can use all the data

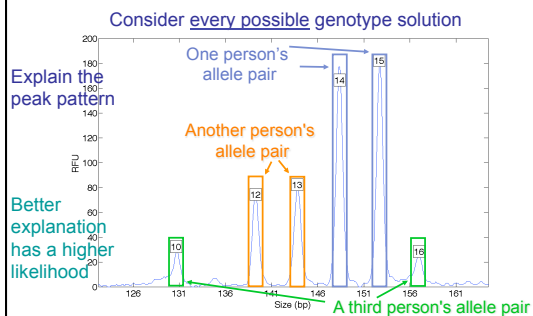

People may use less of the data

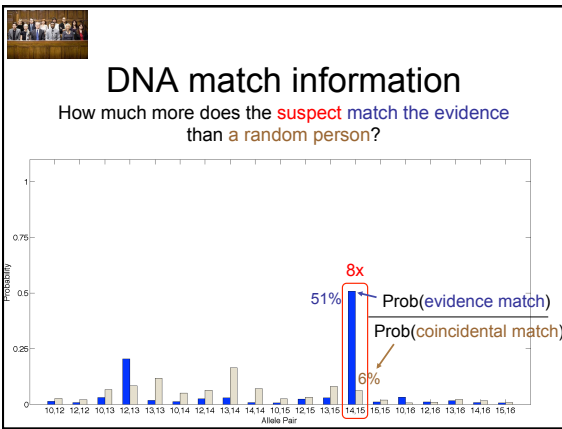

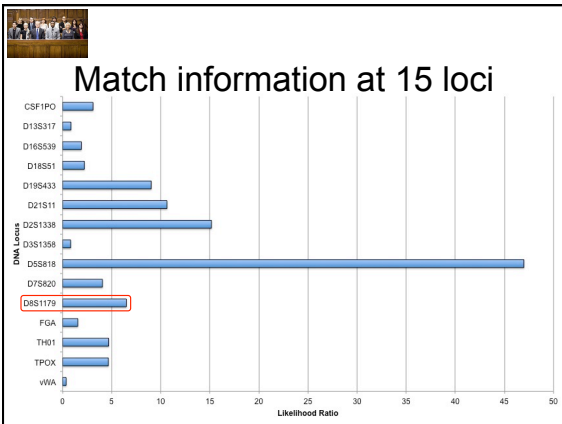

How the computer thinks

Is the suspect in the evidence?

A match between the front counter
and Dupree Langston is:

553 million times more probable than
a coincidental match to an unrelated Black person

731 million times more probable than
a coincidental match to an unrelated Caucasian person

208 million times more probable than
a coincidental match to an unrelated Hispanic person

TrueAllele reinterpretation

The Washington Post

Virginia reevaluates DNA evidence in 375 cases

July 16, 2011

“Mixture cases are their own little nightmare,” says
William Vosburgh, director of the D.C. police’s crime
lab. “It gets really tricky in a hurry.”

“If you show 10 colleagues a mixture,
you will probably end up with 10 different answers”
Dr. Peter Gill, Human Identification E-Symposium, 2005

Virginia validation study

- 72 criminal cases
- 92 evidence items
- 111 genotype comparisons

Criminal offense

- 18 homicide
- 12 robbery
- 6 sexual assault
- 20 weapon

Mixture method comparison

6.83 (2.22)
6.68 million

CPI

2.15 (1.68)
140

mCPI

11.05 (5.42)
113 billion

TrueAllele

DNA mixture crisis

375 cases/year x 4 years = 1,500 cases
320 M in US / 8 M in VA = 40 factor
1,500 cases x 40 factor = 60,000 inconclusive

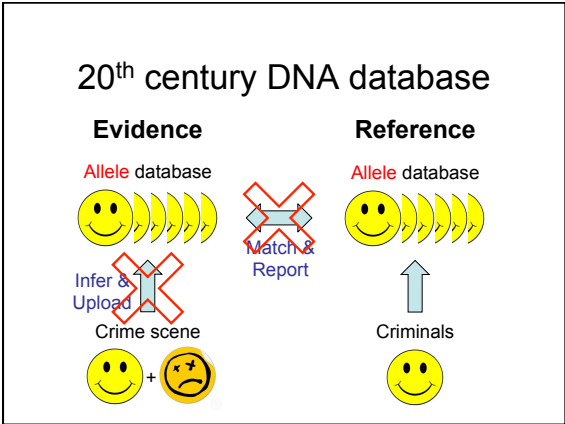

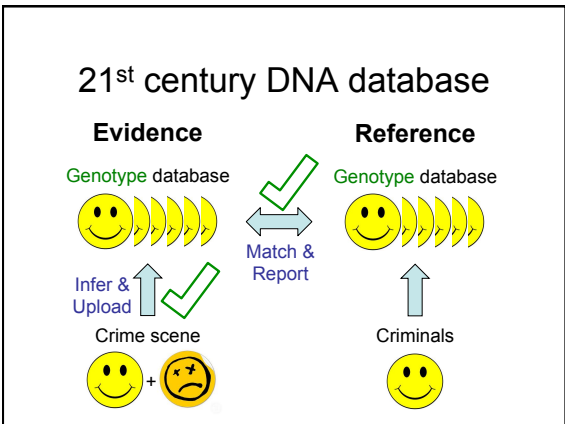

1,000 cases/year x 4 years = 4,000 cases
320 M in US / 8 M in NY = 40 factor
4,000 cases x 40 factor = 160,000 inconclusive

+ underreporting of DNA match statistics

DNA evidence data in 100,000 cases
Collected, analyzed & paid for – but unused

TrueAllele in criminal trials

Over 150 case reports filed on DNA evidence

<p>Court testimony:</p> <ul style="list-style-type: none"> • state • federal • military • foreign 	<p>Crimes:</p> <ul style="list-style-type: none"> • armed robbery • child abduction • child molestation • murder • rape • terrorism • weapons
--	---

TrueAllele usage in the US

Casework system
Interpretation services
Admissibility hearing

All the DNA, all the time

Objective, reliable truth-seeking tool

- solves the DNA mixture problem
- handles low-copy and degraded DNA
- provides accurate DNA match statistics
- automates DNA evidence interpretation

Currently used to:

- eliminate DNA backlogs
- reduce forensic costs
- solve crimes
- find criminals
- convict the guilty
- free the innocent
- create a safer society

TrueAllele today

Invented math & algorithms	20 years
Developed computer systems	15 years
Support users and workflow	10 laboratories
Used routinely in casework	3 labs
Validate system reliability	20 studies
Educate the community	50 talks
Train & certify analysts	200 students
Go to court for admissibility	5 hearings
Testify about LR results	20 trials
Educate lawyers and laymen	1,000 people
Make the ideas understandable	150 reports
