## Short tandem repeat

23 volumes in cell's DNA encyclopedia

DNA locus paragraph

Take me out to the ball game  
 take me out with the crowd  
 buy me some peanuts and Cracker Jack  
 I don't care if I never get back  
 let me  
 root root root root root root root root  
 for the home team,  
 if they don't win, it's a shame for its one two  
 three strikes, you're out  
 at the old ball game

"root" repeated 10 times, so allele length is 10 repeats

---

---

---

---

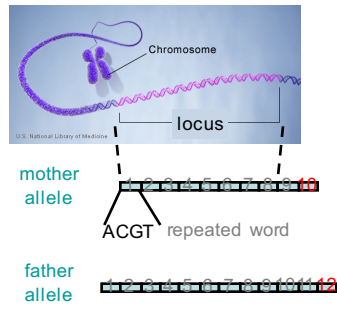

---

---

---

---

## DNA genotype

Chromosome

locus

mother allele  
 ACGT repeated word

father allele  
 1 2 3 4 5 6 7 8 9 10 11 12

A genetic locus has two DNA sentences, one from each parent.

An allele is the number of repeated words.

A genotype at a locus is a pair of alleles.  
 10, 12

Many alleles allow for many many allele pairs. A person's genotype is relatively unique.

## MIX13: Statistics falsely include

**MIX13 Case 5 Outcomes with Suspect C**  
 (whose genotypes were **not present in the mixture**)

# Labs	Report Conclusions	Reasons given
6	Exclude Suspect C	detailed genotype checks (ID+); TrueAllele negative LR (ID+); assumed major/minor and suspects did not fit (ID+); 3 labs noted Pointa E missing allele 15 (PP16HS)
3	Inconclusive with C only (A & B included)	All these labs used PP16HS
21	Inconclusive for A, B, and C	
70	<b>Include &amp; provide CPI statistics</b>	<i>All over the road...</i>

Range of CPI stats for Caucasian population:  
 FBI allele frequencies: **1 in 9** to **1 in 344,000**

---

---

---

---

---

---

---

---

---

---

## CPI lacks probative value

**J Pathol Inform** Open Access HTML format

Research Article  
**Inclusion probability for DNA mixtures is a subjective one-sided match statistic unrelated to identification information**  
 Mark William Perlin\*

Forensic crime laboratories have generated CPI statistics on **hundreds of thousands of DNA mixture evidence items**. However, this commonly used match statistic behaves like a **random generator of inclusionary values**, following the LLN rather than measuring identification information. A quantitative CPI number **adds little meaningful information** beyond the analyst's initial qualitative assessment that a person's DNA is included in a mixture. **Statistical methods for reporting on DNA mixture evidence should be scientifically validated before they are relied upon by criminal justice.**

---

---

---

---

---

---

---

---

---

---

## Subjective interpretation

- (1) Choose, alter, discard, edit, and manipulate the DNA **data signals**
- (2) Compare defendant's **genotype** to edited **data** & decide if he is in the DNA evidence
- (3) If he is "included", then **calculate** a DNA mixture statistic

---

---

## Evidence genotype

**Objective** genotype determined solely from the DNA data.  
Never sees a comparison reference.

---

---

---

---

---

---

---

---

## DNA match information

How much more does the **suspect** match the evidence than a **random person**?

---

---

---

---

---

---

---

---

## Match information at 15 loci

---

---

---

---

---

---

---

---

## Is the suspect in the evidence?

A match between the water bottle  
and Christopher Hutsell is:

19 billion times more probable than  
a coincidental match to an unrelated African-American person

74.9 billion times more probable than  
a coincidental match to an unrelated Caucasian person

127 billion times more probable than  
a coincidental match to an unrelated Hispanic person

---

---

---

---

---

---

---

---

## Is the victim in the evidence?

A match between the water bottle  
and Julia Zoe Anderson is:

889 thousand times more probable than  
a coincidental match to an unrelated African-American person

1.11 million times more probable than  
a coincidental match to an unrelated Caucasian person

1.75 million times more probable than  
a coincidental match to an unrelated Hispanic person

---

---

---

---

---

---

---

---

## Life sentence

Jury convicts Christopher Hutsell in  
stabbing death of Indiana transient  
*The Times-Picayune*

A New Orleans jury on Tuesday night (November 17, 2015) convicted Christopher Hutsell in the March 19 stabbing death of Julia "Zoe" Anderson. Hutsell, 38 years old and homeless, faces a mandatory sentence of life in prison on a second-degree murder charge after refusing to plead guilty to manslaughter in exchange for a 40-year sentence.

---

---

---

---

---

---

---

## DNA transfer

- How did DNA get there?
- When was DNA deposited?

Multiple mixtures reduce coincidence  
 Left & right hand mixtures  
 Both defendants present

**Defense:** Isn't DNA transfer a possibility?

**Expert:** Not very likely to happen twice.

---

---

---

---

---

---

---

---

## Convictions obtained

Guilty verdicts handed down in Thomas-Wilson murder trial  
*Ville Platte Gazette*

TrueAllele statistically matched the defendants' DNA to the DNA collected from the fence at the crime scene.

After seven days of listening to eye witness and expert testimony, an Evangeline Parish Jury of 12 found Reokinski Thomas and Hilton Wilson guilty of first degree murder and attempted first degree murder (March 16, 2016).

The prosecutors polled the jury after trial – the DNA was crucial in obtaining the convictions

---

---

---

---

---

---

---

---

## TrueAllele is reliable

On June 30, 2012, Darius Vicks was waiting for a traffic light to change. Jordan Key was a passenger in the Baton Rouge car. Chattley Chesterfield got out of a vehicle behind them, ran up to the car, and fired three shots into the car, killing Key and injuring Darius Vicks

Crime lab: pistol DNA mixture of 3 people

---

---

---

---

---

---

---

---

## DNA mixture data pattern

Quantitative peak heights at locus D16S539

---

---

---

---

---

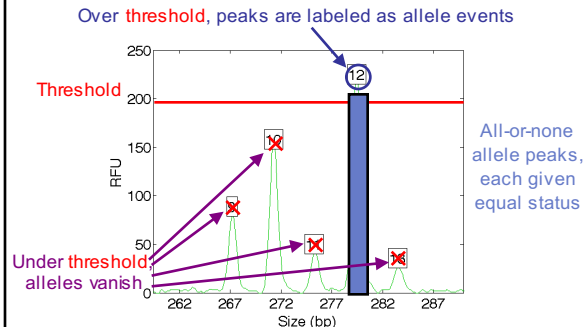

---

---

---

## Older methods use less data

---

---

---

---

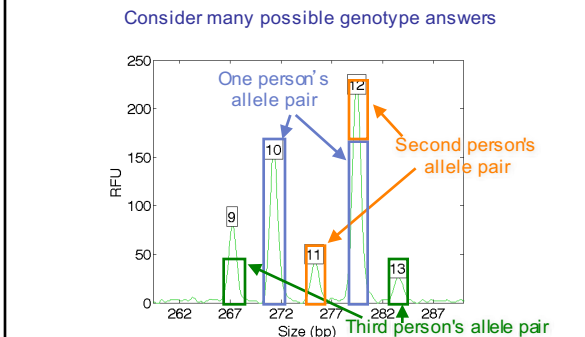

---

---

---

---

## TrueAllele explains all the data

---

---

---

---

---

---

---

---

## Are the suspects in the evidence?

A match between the pistol  
and **Chatley Chesterfield** is:  
**108 thousand** times more probable than  
a coincidental match to an unrelated **Black** person

A match between the pistol  
and **Samuel Nicholas** is:  
**3,210** times more probable than  
a coincidental match to an unrelated **Black** person

---

---

---

---

---

---

---

---

## Reliability (La. Rule 702)

### Testimony by Experts

A witness who is qualified as an expert by knowledge, skill, experience, training, or education may testify in the form of an opinion or otherwise if:

- (1) The expert's scientific, technical, or other specialized knowledge will help the trier of fact to understand the evidence or to determine a fact in issue;
- (2) The testimony is based on sufficient facts or data;
- (3) The testimony is the product of reliable principles and methods; and
- (4) The expert has reliably applied the principles and methods to the facts of the case.

---

---

---

---

---

---

---

---

## *Daubert v. Merrell Dow Pharmaceuticals (1993)*

*Plaintiff:* Bendectin caused birth defects  
*Defendant:* no reliable scientific evidence

Judge as gatekeeper

### TrueAllele® Genotype Identification on DNA Mixtures Containing up to Five Unknown Contributors\*

**ABSTRACT:** Computer methods have been developed for mathematically interpreting mixed and low-template DNA. The genotype model approach computationally separates out the contributors to a mixture, with uncertainty represented through probability. Comparison of inferred genotypes calculates a likelihood ratio (LR), which measures identification information. This study statistically examined the genotype modeling performance of Cybergenetics' TrueAllele® computer system. High- and low-template DNA mixtures of known randomised composition containing 2, 3, 4, and 5 contributors were tested. Sensitivity, specificity, and reproducibility were established through LR quantification in each of these eight genotypes. Concordance analysis found LR behavior to be relatively invariant to DNA amount or contributor number. Analysis of variance found that consistent solutions were produced, once a sufficient number of contributors were considered. This study demonstrates the reliability of TrueAllele interpretation on complex DNA mixtures of representative casework composition. The results can help predict an information outcome for a DNA mixture analysis.

**KEYWORDS:** forensic science, DNA mixture, genotype modeling, validation study, likelihood ratio, probabilistic genotyping
